Subject: No-cost extension for CA5563
Date: Wednesday, December 8, 2021 12:31:29 PM
Importance: High

Hello Post-award,

Please process a no-cost extension for CA5563 - Beta Hatch- Fish Meal Replacement until March 31, 2022. The justification is that, given the late start, supply chain issues, and the holidays, we will not be likely able to complete all the analyses and expend the budget by the end of the year. Also, I have not heard back from the histology lab on their timeline yet and am expecting delays due to personnel shortages communicated to me earlier this fall. As such, I would like to extend the contract by 3 months until March 31, 2022.

Thank you,
Brian

Importance: High

Hi Brian,

Thanks for the heads up. We do not have a problem with the no-cost extension. Let me know what paperwork I need to sign. Thanks!

Cheers,

Virginia

Hi Aimee and Hans,

As I explained to Anthony yesterday, I need to request a no-cost extension for the project. The current contract ends December 31, 2021. Given the late start, supply chain issues, and the holidays, we will not be likely able to complete all the analyses and expend the budget by the end of the year. Also, I have not heard back from the histology lab on their timeline yet and am expecting delays due to personnel shortages communicated to me earlier this fall. As such, I would like to extend the contract by 3 months until March 31, 2022. I expect to be able to write a near-complete report by early January, with all but the histology. We do everything else in house.

Please let me know if this is possible, then I will reach out to our Office of Sponsored Projects to officially request the no-cost extension.

Thank you,
Brian
